

MANVEER SINGH

Engineering Manager | Hands-on Team Lead

Berlin, Germany (relocating) | manveer9915@gmail.com | +91 99152 01749 | linkedin.com/in/manveer-singh-72b168130 | manveer1999.github.io

Work authorisation: EU Blue Card eligible, with the paperwork already done. B.Tech listed in anabin (institution DAV University, status H+; degree rated "corresponds"), so no individual credential assessment is required. Every document on my side is already gathered, so nothing is outstanding but the offer. Relocating to Germany. **Earliest start: about three months from a signed contract** — I am employed and serve 60 days' notice, and the binding constraint is the Blue Card appointment queue at the German mission in India, which runs alongside it. Happy to work with your legal team on the accelerated skilled-worker procedure (§81a AufenthG).

PROFILE

Engineering manager of eight, grown from four, running a cross-functional pod across backend, frontend, mobile and QA on a US SaaS product. I grew team throughput while cutting my own execution share by three quarters, which is the only version of delegation that counts. I still read the code, carry the hard escalations myself, and I have reversed my own team in public when the deeper analysis said I should.

SELECTED IMPACT

- Grew the pod from **four reports to eight**. Team throughput held at 90 to 115 resolved tickets per quarter for **eight consecutive quarters** while my own execution share fell from 100% to 25%.
- Raised and assigned **215 tickets to 24 engineers**, with visible specialisation by engineer rather than round-robin allocation.
- Rewrote an org-wide release-plan standard I was asked only to review. The author's reply: "*this is exactly the pick-apart I asked for. All of it landed in v2, now published as the standard.*"
- Ran an AI adoption programme for the team and then a wider engineering audience, and published the **negative results** about my own initiative: 2x, not 10x, with supervision non-negotiable.
- An incident I handled produced a standing org-wide policy that security-alert dismissals now require lead-level approval.

EXPERIENCE

Logiciel Solutions | Ludhiana, India

Engineering team on a US SaaS platform for the construction and home-improvement industry

*Progression: joined as Senior Engineer Grade 4 (Mar 2022), promoted to Grade 5 (Mar 2024), appointed Engineering Lead (Nov 2024), promoted to **Grade 6** (Apr 2026). Three step-ups in four years.*

Engineering Lead (Senior Engineer, Grade 6) | Nov 2024 to Present

People and growth

- Manage eight engineers across backend, frontend, mobile and QA, plus a newly formed Data pod spanning two products from mid-2026.
- Run the full people loop: quarterly OKRs and certification plans per report, quarterly goals, appraisal one-to-ones, and onboarding with a named mentor rather than a buddy assigned by default.
- Defended a report to a VP who challenged his visible output, arguing the case on substance, then offered two concrete growth paths unprompted and asked for sponsorship to fund them.

- **Run technical interviews** for mobile and full-stack roles, and act as the internal go-to for Flutter interview questions across teams.
- Built a Flutter learning path for a mentee on another team after his colleague resigned. Coached a peer lead on pull-request review.
- Onboarded a replacement engineer and managed an offboarding handover personally.

Delegation and ownership design

- Published a single-writer rule for shared release documents that specified what the owner was **not** accountable for, which is the part people usually leave out. Adopted beyond my own team.
- Adopted a report's better mechanism in public and aligned the other leads so the same process ran across teams.
- Rotated the release lead across the team rather than owning every release myself, with the change card and named lead posted each time.

Carrying exposure upward

- Took a database index exception to the VP layer during a company-wide code freeze. Before I did, I interrogated my own engineer rather than relaying her confidence, then padded her staging-tested rollback estimate before quoting it to the approver. Approved with risk, blast radius and rollback stated upfront.
- On a high-severity credential-exposure incident I wrote the escalation, deliberately reduced the number of people exposed to it, and wrote and shipped the fix myself as a same-day hotfix.
- Reversed my own engineers in front of my skip-level on two dismissed security alerts, after first defending their reasoning with the real context. The outcome was a new permanent org policy.

Delivery and standards

- Own the release function: 158 production releases personally across six server roles, five auto-scaling groups, web, public API, mobile and serverless.
- Authored org-level standards including a PII policy, a branch and pull-request contract, and a flag-type-specific rollout strategy.
- Wrote and taught an internal guide on engineering communication, then applied it in an MFA support guide written deliberately with zero code blocks for a non-technical audience.

Technical direction

- Designed a consolidation of a sprawling Google Cloud estate (87 keys, 40+ projects, six billing accounts) into four projects under org policy and Terraform. Approved with conditions by the VP of Engineering.
- Root-caused a 12-hour platform-wide outage that produced no alert, and recommended against the requested fix because it would have removed the only spend containment and masked five real defects.
- Recommended against launching a completed micro-frontend migration after invalidating my own team's benchmark first.
- Solution architect on cross-cutting work, including a twelve-microfrontend split plan and integration contract ownership. Run project discovery as boundary-defined spikes with explicit exclusions and hazard-flagged sequencing.

Senior Software Engineer, Mobile (Grade 4, then Grade 5) | Mar 2022 to Nov 2024

- Led Flutter development on the flagship CRM app across iOS and Android. Owned architecture, release, code signing and Crashlytics-gated staged rollout.
- De facto mobile release owner from March 2024, eight months before holding the title.
- Diagnosed and fixed an iOS storage failure consuming 97.94 GB on a customer device, shipped behind a kill switch and verified with a controlled two-device A/B.

Code Infosys | Surat, India

Associate Flutter Developer | Oct 2021 to Mar 2022

Junior Flutter Developer | Oct 2020 to Oct 2021

- Started in **native Android development and app publishing**, then moved to Flutter as the team's cross-platform bet.
- Shipped six products in eighteen months across health-tech, fitness and food delivery: video calling, Stripe and Braintree payments, live location tracking, real-time chat and local databases.
- Client-facing from the Associate grade onward: engaged directly with clients to resolve issues, ran R&D to keep the stack current, and wrote technical blogs.

NetMatics4u | Flutter Tutor | Jun 2020 to Oct 2020

HeyFlutter.com | YouTube Community Manager | 2020 to Present (part time)

- Instructed and mentored **more than 40 students** in Flutter, guiding them through real summer projects rather than exercises.
- Run the HeyFlutter.com YouTube community: developer questions at volume, moderation and technical engagement.

LEADERSHIP PRACTICE

Quarterly OKRs and growth plans per report | Appraisal and development one-to-ones | Named-mentor onboarding | Technical interviewing | Delegation with specialisation | Rotating release ownership | Incident command and escalation | Cross-team standards authoring | Solution architecture | Project discovery and scoping | Internal AI adoption programme design

TECHNICAL

Written unaided: Flutter, Dart, Android (native origin), iOS · release engineering, code signing, staged rollout, Crashlytics gating · two packages published to pub.dev

Worked AI-first (I read, direct, review and own the outcome; I do not claim independent senior fluency): PHP with Laravel, Node, TypeScript, MySQL · React, AngularJS, Module Federation · Google Cloud, AWS, Terraform, GitHub Advanced Security, CodeQL, LaunchDarkly, New Relic

Tooling: Claude Code skills, agents and MCP · Jira, Confluence, Agile

RECOGNITION

EDUCATION AND CERTIFICATION

B.Tech, Computer Science Engineering | DAV University, Jalandhar | 2017 to 2021 | **CGPA 9.4**

anabin: institution status H+, degree rated "corresponds" to a German Bachelor

Claude Certified Architect, Foundations | 934 / 1000 | May 2026

Open source: pub.dev/packages/sms_mms, a Flutter package I wrote and maintain on pub.dev.
