

MANVEER SINGH

Engineering Lead | Platform, Reliability & Security

Berlin, Germany (relocating) | manveer9915@gmail.com | +91 99152 01749 | linkedin.com/in/manveer-singh-72b168130 | manveer1999.github.io

Work authorisation: EU Blue Card eligible, with the paperwork already done. B.Tech listed in anabin (institution DAV University, status H+; degree rated "corresponds"), so no individual credential assessment is required. Every document on my side is already gathered, so nothing is outstanding but the offer. Relocating to Germany. **Earliest start: about three months from a signed contract** — I am employed and serve 60 days' notice, and the binding constraint is the Blue Card appointment queue at the German mission in India, which runs alongside it. Happy to work with your legal team on the accelerated skilled-worker procedure (§81a AufenthG).

PROFILE

Engineering lead with six years across mobile, backend and cloud platform, currently running an eight-person pod on a US SaaS product. I work on the problem underneath the ticket: cloud estate design, incident forensics, release engineering across a distributed deployment, and putting AI agents into an engineering workflow without losing track of who is accountable. I reframe the problem before solving it, and I publish the evidence that disagrees with me.

SELECTED IMPACT

- Audited a Google Cloud estate down to the facts nobody had: 87 API keys across 40+ projects, six billing accounts, no Organization. Designed a seven-phase consolidation to four projects under org policy and Terraform. Returned **approved with conditions** by the VP of Engineering.
- Root-caused a **12-hour platform-wide geocoding outage** that produced no alert and no incident, triangulating four independent data sources to within 1-2%. Found **16.8% of the address estate** (2,193,592 of 13.06 million records) silently excluded from every proximity search by a NULL-comparison defect.
- Recommended **against** launching a completed micro-frontend migration, after invalidating my own team's first benchmark. Not shipped, with the conditions for revisiting documented.
- Rewrote an org-wide release-plan standard I was asked only to review. Adopted in full into v2 and published as the company standard.
- Cut manual involvement in mobile CI/CD from roughly **1.5 hours to 10 minutes** per release.

EXPERIENCE

Logiciel Solutions | Ludhiana, India

Engineering team on a US SaaS platform for the construction and home-improvement industry

*Progression: joined as Senior Engineer Grade 4 (Mar 2022), promoted to Grade 5 (Mar 2024), appointed Engineering Lead (Nov 2024), promoted to **Grade 6** (Apr 2026). Three step-ups in four years.*

Engineering Lead (Senior Engineer, Grade 6) | Nov 2024 to Present

- Lead a cross-functional pod of eight (backend, frontend, mobile, QA), and from mid-2026 a newly formed Data pod spanning two products.
- Own the release function: **158 production releases personally**, across six server roles, five independent auto-scaling groups, web, public API, mobile and serverless.

- Raised and assigned **215 tickets to 24 engineers** with deliberate specialisation rather than round-robin. Team throughput held at 90 to 115 resolved per quarter for eight consecutive quarters while my own execution share fell from 100% to 25%.
- Own platform security: 71 security tickets, six-step per-repo secret-scanning playbooks across five repositories, brute-force lockout design with an anti-DoS ceiling, an MFA programme including support enablement, and CodeQL data-flow analysis.
- Production reliability and database work: cut a customer-facing response path from ~13s to ~2s; rejected a proposed index on execution-plan evidence and shipped the fix that worked instead; carried an index exception through a company-wide code freeze with risk, blast radius and a staging-tested rollback stated upfront.
- Introduced and governed AI-assisted engineering: shipped idempotent Claude Code setup skills into five heterogeneous repositories, built an agent that investigates, implements, tests and opens pull requests but stops at human review, and established the ownership-labelled accountability convention the wider team adopted.
- Act as solution architect on cross-cutting projects: a twelve-microfrontend split plan with a dependency matrix and event-bus contract, integration contract ownership, and options analyses scored across weighted dimensions with hard, implementation and hidden costs separated.
- Run project discovery and scoping: boundary-defined spikes with explicit exclusions, requirement interrogation on migration proposals, and phased breakdowns sequenced with hazard flags.
- Authored org-level technical documents that became standards, including a PII policy, a release-plan standard contribution, and repo orientation guidance used as the default onboarding path.

Senior Software Engineer, Mobile (Grade 4, then Grade 5) | Mar 2022 to Nov 2024

- Led Flutter development on the flagship CRM app across iOS and Android. Owned architecture, release, code signing on both stores, and staged rollout gated on Crashlytics with a defined halt rule.
- Diagnosed and fixed an iOS storage failure consuming **97.94 GB** on a customer device against a 105.8 MB bundle. Four compounding defects, fixed with Flutter background isolates and a protected-file deletion allow-list, shipped behind a LaunchDarkly kill switch and verified with a two-device controlled A/B.
- De facto mobile release owner from March 2024, eight months before holding the title.

Code Infosys | Surat, India

Associate Flutter Developer | Oct 2021 to Mar 2022

Junior Flutter Developer | Oct 2020 to Oct 2021

- Started in **native Android development and app publishing**, then moved to Flutter as the team's cross-platform bet.
- Shipped six products in eighteen months across health-tech, fitness and food delivery: video calling, Stripe and Braintree payments, live location tracking, real-time chat and local databases.
- Client-facing from the Associate grade onward: engaged directly with clients to resolve issues, ran R&D to keep the stack current, and wrote technical blogs.

NetMatics4u | Flutter Tutor | Jun 2020 to Oct 2020

HeyFlutter.com | YouTube Community Manager | 2020 to Present (part time)

- Instructed and mentored **more than 40 students** in Flutter, guiding them through real summer projects rather than exercises.
- Run the HeyFlutter.com YouTube community: developer questions at volume, moderation and technical engagement.

TECHNICAL

Cloud and platform: Google Cloud (estate design, org policy, App Check, quota management), AWS (auto-scaling groups, Lambda, Athena), Terraform, GitHub Advanced Security, CodeQL, LaunchDarkly, New Relic, Cloud Monitoring

Backend, worked AI-first (I read, direct, review and own the outcome; I do not claim independent senior fluency): PHP with Laravel on a long-lived legacy estate, Node, TypeScript, Express, Sequelize, MySQL performance tuning and execution-plan analysis

Mobile: Flutter, Dart, isolates, platform channels, FVM, Firebase, code signing, staged rollout, obfuscation with retained symbols

Frontend, worked AI-first: React, AngularJS, Module Federation, micro-frontend decomposition (the decomposition design is mine; the component code is not where my depth is)

AI engineering: Claude Code (skills, agents, MCP), agent-authored pull requests with human review gates, adoption evaluation

Architecture: Solution architecture, micro-frontend decomposition, integration contracts, project discovery and scoping, options analysis and RFC authoring

Practice: Incident RCA, release engineering, progressive delivery, standards authoring, technical writing for mixed audiences, Agile

RECOGNITION

EDUCATION AND CERTIFICATION

B.Tech, Computer Science Engineering | DAV University, Jalandhar | 2017 to 2021 | **CGPA 9.4**

anabin: institution status H+, degree rated "corresponds" to a German Bachelor

Claude Certified Architect, Foundations | 934 / 1000 | May 2026

Open source: pub.dev/packages/sms_mms, a Flutter package I wrote and maintain on pub.dev.

LANGUAGES

English (fluent, working language) | Hindi (native) | Punjabi (native) | German (A1, actively studying)
